Table 1: Pluggable segmentation agents. Any model that fills a role through the same interface can be added; the reasoning does not depend on which models are used.

Agent	Role	Dim.	Modalities	Input and output
BiomedParse [Zhao et al. 2025]	tumor	2D	CT, MR (and 7 others)	text prompt (cancer-specific phrase); tumor mask per slice, stacked to 3D
VoxTell [Rokuss et al. 2025]	tumor and anatomy	3D	CT, MR, PET	free-text prompt (cancer phrase, host-specific tumor phrases, organ names and aliases from K_C); one mask per prompt
Other tumor models	tumor	2D/3D	–	any model returning a tumor mask for a text prompt or the cancer type
TotalSegmentator [Wasserthal et al. 2023; D'Antonoli et al. 2025]	anatomy	3D	CT, MR	automatic; labelled organ masks (CT and MR task models)
VoxTell [Rokuss et al. 2025]	anatomy	3D	CT, MR, PET	free-text organ prompts from the plan K_C (main phrase and aliases)
NV-Segment-CTMR [NVIDIA; He et al. 2025]	anatomy	3D	CT, MR	automatic; 345+ anatomical classes; VISTA3D architecture
Other anatomy models	anatomy	3D	–	any model returning labelled organ masks
